EDUCATION

IIIT HYDERABAD
B.Tech in Computer Science
Oct 2022-May 2026 | Hyderabad

NARAYANA N120 COLLEGE
2020-2022 | Vijayawada

NARAYANA CO SCHOOL 2017-2020| Vijayawada

LINKS

Github

COURSEWORK

Data Structures and Algorithms
Introduction to Software Systems
Computer Systems Organization
Design and Analysis Of Software Systems
Machine and Data Learning
Embedded systems workshop
Linear Algebra
Advanced Computer Networks

SKILLS

PROGRAMMING
1 Million+ lines over
Python • C/C++ • JavaScript • SQL • Bash •C#•Angular
Frameworks: LangChain • Flask • Streamlit • React.js •Node.js •Express.js •ML •Postman •dotnet
Tools: Git • Linux • MongoDB • Neo4j • FAISS • Pinecone

EXPERIENCE

SMARTTERRA | Internship
Jan 2024 - April 2024

• Developed a Website which enables users to understand data through natural language queries without requiring technical analytics skills . Focused on democratizing access to analytics with an intuitive, no-code interface.

• Designed and implemented an end-to-end data pipeline using NLP to interpret user queries, transform database results, and generate real-time visualizations on a Streamlit dashboard.

• Leveraged LangChain for prompt chaining and MongoDB for structured data storage.

CHUBB | Technology Internship
June 2025 - July 2025

• Developing an intelligent code and document exploration system for enterprise apps using LLMs.Building a code knowledge graph using Neo4j by parsing GitHub repos and **generating ASTs**.Generating semantic embeddings for functions, enabling similarity-based retrieval.Linked related documentation (PDFs, PPTs, etc.) by extracting structured text and embedding-based matching.
• Designing an **LLM-powered Q&A interface** using **LangChain** and **RAG** over structured + semantic context.
Enabled impact tracing of code changes across interconnected systems via graph traversal.

PROJECTS

IIIT EATZ FOOD DELIVERY | Convenient Meal Delivery Service Hackathon(Team)
Developed IIIT EATZ Food Delivery, a solution for convenient, delicious meals delivered directly to students' doors. Partnered with campus canteens. Designed and implemented an intuitive website interface for effortless food ordering and real-time tracking.
Techstack used:**HTML,JavaScript,CSS,Python**

NETWORK FILE SYSTEM(NFS) | Distributed File Sharing Oct-Nov 2023(Team)
Built a distributed file system in C to support concurrent file operations across clients (read/write/delete/list). Implemented concurrency control and metadata retrieval. Demonstrated understanding of file systems and network protocols.

AIRBENEGLOW | Personalized care website
Built a real-time environmental analytics web app using sensor data (CO_2, VOC, humidity, temp).Mimicked embedded systems behavior for input processing. Provided actionable insights using logic-based rules. Tech stack: HTML, JavaScript, Python,
